Note: Within nine months from the publication of the mention of the grant of the European patent, any person may give notice to the European Patent Office of opposition to the European patent granted. Notice of opposition shall be filed in a written reasoned statement. It shall not be deemed to have been filed until the opposition fee has been paid. (Art. 99(1) European Patent Convention).

**EP 0 826 364 B1**

**Description****BACKGROUND OF THE INVENTION****Field of the Invention:**

[0001] The present invention relates to the use of a specific composition as a keratotic plug remover which excellently removes keratotic plugs formed in the pores of the skin, and a method of removing keratotic plugs from the skin utilizing such a keratotic plug remover.

**Discussion of the Background:**

[0002] Having conspicuous pores in the skin is a serious skin problem, especially for women, and is mainly caused by keratotic plugs formed in the pores of the skin. Keratotic plugs are dead epidermal cells keratinized together with sebaceous matters and dirt which plug the pores of the skin. If proper treatment is not given, not only conspicuous pores but also various skin troubles result. Accordingly, removal of keratotic plugs is advisable in view of the health and beauty of the skin.

[0003] Ordinary face detergents, make-up removers, however, cannot sufficiently remove the keratotic plugs.

[0004] Pack preparations, which are applied to the skin and peeled off after dried, and which generally contain a non-ionic polymer such as polyvinyl alcohol and polyvinyl pyrrolidone as a major component of a film forming agent, are still not sufficiently effective for removing dirt from the skin pores and especially for removing keratotic plugs.

[0005] Thus, there remains a need for a keratotic plug remover which can effectively remove keratotic plugs formed in the pores of the skin and a method of removing keratotic plugs from the skin utilizing such plug removers.

**SUMMARY OF THE INVENTION**

[0006] Accordingly, it is one object of the present invention to provide novel uses of a specific composition as keratotic plug-removers which effectively remove keratotic plugs from the skin.

[0007] It is another object of the present invention to provide a method for removing keratotic plugs from the skin which utilized such keratotic plug removers.

[0008] These and other objects which will become apparent during the following detailed description have been achieved by the inventors discovery that a keratotic plug remover which comprises a synthetic polymer having a salt forming group can effectively remove keratotic plugs and dirt from the pores of the skin.

**DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS**

[0009] The salt forming group of the polymer which is useful in the present invention is not particularly limited as long as it can form a salt in the presence of an acid or a base, and anionic, cationic and amphoteric groups are suitable. Examples of the salt forming group are carboxyl, sulfonic acid group, sulfuric acid residual group ( $-\text{OSO}_3\text{H}$ ), phosphoric acid residual group ( $-\text{OPO}_3\text{H}_2$ ), nitric acid residual group ( $-\text{NO}_2$ ), amino group, ammonium group, and the like. Two or more of these groups may be present in one compound.

[0010] The polymer compound which is useful in the present invention is preferably water-soluble from the viewpoint of good appearance, but it is not necessarily water-soluble for the purpose of achieving the effects of this invention. The compounds which are not water-soluble may take the form of dispersion and/or emulsion.

[0011] Examples of the polymers useful in the present invention include: hyaluronic acid, sodium hyaluronate, sodium chondroitin sulfate which are mucopolysaccharides; alginic acid, sodium alginate, ammonia alginate, sodium carboxymethylcellulose, and carboxymethyl amylose which are hemicelluloses. These are of natural origin or semi-synthesized polymers. In this invention, synthesized polymers are more preferable. Examples of the synthesized polymers include (A) polymers of one or more monomers listed in (1) to (3) below, (B) copolymers of the monomers as listed in (1) to (3) and another monomer which has no salt forming group, such as vinyl esters of aliphatic carboxylic acid such as vinyl acetate, (meth)acrylic esters such as methyl methacrylate, alkyl vinyl ethers such as methyl vinyl ether, N-vinyl cyclic amides such as N-vinylpyrrolidone, styrene and alkyl-substituted styrene, and (C) mixtures of the above-mentioned polymers.

**(1) Anionic monomers:**

Acrylic acid (AA), Methacrylic acid (MA), Maleic acid, itaconic-acid and the like, which are unsaturated carboxylic acid monomers or their anhydrides or their salts;

Styrene sulfonic acid, 2-Acrylamide-2-methyl propane sulfonic acid (AMPS) and the like, which are unsaturated sulfonic acid monomers or their salts;

Vinyl phosphonic acid, Acid phosphoxyethyl (meth)acrylate and the like, which are unsaturated phosphoric monomers.

## (2) Cationic monomers,

Dimethylaminoethyl acrylate (DMAEA), Dimethylaminoethyl methacrylate (DMAEMA), Dimethylaminopropylacrylamide (DMAPAAm), Dimethylaminopropyl methacrylamide (DMAPMAAm), and the like, which are (meth)acrylamides or (meth)acrylic acid esters having a dialkylamino group;

Dimethylaminostyrene (DMAS), Dimethylaminomethylstyrene (DMAMSt) and, the like, which are styrenes having a dialkylamino group;

4-Vinyl pyridine, 2-vinyl pyridine and the like, which are vinyl pyridines;

Quaternarized products of these with a known quaternarizing agent such as alkyl halide, benzyl halide, alkyl or aryl sulfonic acid, or dialkyl sulfate.

## (3) Amphoteric monomers

N-(3-sulfopropyl)-N-acryloyloxyethyl-N,N-dimethylammonium betaine, N-(3-sulfopropyl)-N-methacroylamidepropyl-N,N-dimethylammonium betaine, N-(3-carboxymethyl)-N-methacroylamidepropyl-N,N-dimethylammonium betaine, N-carboxymethyl-N-methacroyloxyethyl-N,N-dimethylammonium betaine.

[0012] When the salt forming group of these polymers is not ionized, it is preferred to ionize it via neutralization with known acids such as hydrochloric acid and sulfuric acid which are inorganic acids; acetic acid, propionic acid, lactic acid, succinic acid, glycol acid which are organic acids, or with known bases such as triethylamine, trimethylamine which are tertiary amines; ammonia; or sodium hydroxide.

[0013] Among the mentioned polymer compounds, preferred ones in view of the mildness to the skin and high effectiveness for removing keratotic plugs are polymers of one or more cationic monomers, copolymers between one of these polymers and an amphoteric monomer or a monomer having no salt forming groups, and mixtures of these polymers.

[0014] Preferable examples of the cationic monomers include dimethylaminoethylacrylate (DMAEA), dimethylaminoethylmethacrylate (DMAEMA), dimethylaminopropylacrylamide (DMAPAAm), dimethylaminopropyl methacrylamide (DMAPMAAm) and the like, which are (meth)acrylic esters or (meth)acrylamides having a dialkylamino group; and quaternary compound of them which are quaternarized with a known quaternarizing agent such as alkyl halide, benzyl halide, alkyl or aryl sulfonic acid or dialkyl sulfate. Among them, especially preferred are dimethylaminoethylmethacrylate (DMAEMA) and its quaternarized products; quaternarized products of dimethylaminopropyl methacrylamide (DMAPMAAm); polymers of one or more of these monomers; copolymers between one or more of these monomers, and the above-mentioned monomers; and mixtures thereof.

[0015] The molecular weight (weight average) of these polymers is preferably in the range of from 10,000 to 1,500,000, and especially from 100,000 to 1,000,000. Molecular weights less than 10,000 will result in insufficient film strength and easily breakable films upon peeling-off. Polymers having a molecular weight over 1,500,000 are difficult to manufacture.

[0016] The preferable amount of the polymer to be incorporated into the keratotic plug remover preparation according to the invention is from 0.01 to 70% by weight, preferably 5 to 40% by weight based on the total weight of the preparation.

[0017] The above-mentioned synthesized polymers are used as dissolved in a solvent. The solvent useful in this invention is volatile and is not particularly limited as long as it can stably dissolve the polymers and is safe to the skin. Examples of such solvents include water, ethanol, isopropyl alcohol (IPA) and the like. They are used singly or in combination. The amount of the solvent is modified depending on the properties of the polymer compounds, optional ingredients and forms of the preparation, and is generally from 30 to 99.99% by weight, and preferably from 60 to 95% by weight, based on the total weight of the composition.

[0018] The efficacy of the keratotic plug remover of this invention is enhanced when a pigment is further incorporated together with the mentioned polymers. The pigment is not particularly limited, and both organic and inorganic pigments can be used. Examples of the inorganic pigments are zinc oxide, titanium oxide, silica, alumina, barium sulfate, zirconium oxide, calcium carbonate, calcium silicate, ceramics, hydroxyapatite, boron nitride, sericite, mica, talc, kaolin, montmorillonite, hectorite, saponite; black iron oxide, yellow iron oxide, red iron oxide, prussian blue, ultramarine, carbon black, pearlescent pigments and so on. Examples of the organic pigments are silk powders, cellulose powders, poly(meth)acrylic ester resins, polyamide resins, polyolefin resins, polyimide resins, polyurethane resins, polyester res-

ins, polyether resins, polyvinyl chloride resins, urea resins, polyformaldehyde resins, polycarbonate resins, polyvinylacetate resins, polyvinylidene chloride resins, polyacrylonitrile resins, polysulfone resins, polystyrene resins, polyurea resins, silicone resins, melamine resins, polytetrafluoroethylene resins, rake pigments and azo dyes.

[0019] The particle size of the pigments is from 0.001 to 1000 micrometers, and preferably from 0.01 to 500 micrometers. Particle size of less than 0.001 micrometer is not preferred because good dispersibility cannot be obtained. Particle size over 1000 micrometers is not preferred, either, because of an unfavorable sensation to the skin. The mentioned pigments can be used as a complex or a mixture of one or more, if desired. The amount of the pigment is from 0.1 to 70% by weight, preferably from 1 to 40% by weight based on the total weight of the preparation.

[0020] When an oil component is further incorporated together with the polymers, the keratotic plug remover of this invention can achieve excellent removal of keratotic plugs without giving irritation to the skin. This is because the strength of the film at which it breaks upon peeling-off can be controlled by the oil component.

[0021] The oil component which is useful in this invention is a glycerol derivative represented by formula (I):

wherein one of  $\text{Z}^1$  and  $\text{Z}^2$  represents  $\text{R}^2 - \text{Y}$  and the other represents a hydroxyl group or  $\text{R}^3 - \text{Y}$ , and  $\text{R}^1$ ,  $\text{R}^2$  and  $\text{R}^3$  independently represent a hydrocarbon group, the total carbon number of which ranges from 13 to 40, and the hydrocarbon group may or may not be substituted by a silicone residual group, X and Y independently represent an oxygen-atom or a group  $-\text{COO}-$ , (a carboxyl group in which the C atom is bonded to  $\text{R}^1$ ,  $\text{R}^2$ , or  $\text{R}^3$ ). Other oily ingredients which are generally incorporated into cosmetic preparations can also be used. Examples of the oil component which is useful in this invention include vegetable oils such as avocado oil, tsuaki oil, macadamia nut oil, olive oil and jojoba oil; animal oils and fats such as beef tallow, lard and egg yolk fat; aliphatic acids such as oleic acid and isostearic acid; alcohols such as hexadecyl alcohol and oleyl alcohol; esters such as cetyl 2-ethylhexanoate, 2-ethylhexyl palmitate, 2-octyldodecyl myristate, neopentyl glycol di-2-ethyl hexanoate, 2-octyldodecyl oleate, isopropyl myristate, glycerol triisostearate, mono-2-ethylhexanoic glyceryl di-paramethoxycinnamate; and hydrocarbons such as dimethylpolysiloxane, dimethyl cyclopentasiloxane, methylphenyl polysiloxane, methylhydrogen polysiloxane, octamethyl cyclotetrasiloxane, octamethyl cyclopentasiloxane, decamethylcyclopentasiloxane, liquid-paraffin, squalane, vaseline and solid paraffin.

[0022] Among these oil components, glycerol derivatives of formula (1) which are liquid at 20°C are preferred, and particularly, tri-2-ethylhexanoic glycerol, 1-isostearoyl-3-myristoyl glycerol, 2-ethylhexanoic diglyceride, 1-hexyl-3-undecamethylhexasiloxyl propynyl glycerol are most preferred.

[0023] The amount of the oil components to be incorporated into the keratotic plug remover of this invention is from 0.5 to 30% by weight, preferably, 1 to 15% by weight based on the total weight of composition.

[0024] The keratotic plug remover preparation of this invention can further contain optional ingredients which are generally incorporated into cosmetic preparations. Examples of such optional ingredients include ethylene glycol, diethylene glycol, triethylene glycol and higher polyethylene glycols; propylene glycol, dipropylene glycol and higher polypropylene glycols, 1,3-butylene glycol, 1,4-butylene glycol and other butylene glycols; glycerol, diglycerol and higher polyglycerols; sugaralcohols such as sorbitol, mannitol, xylitol and maltitol; ethylene oxides (hereinafter referred to as EO) such as glycerols; addition products of propylene oxide (hereinafter referred to as PO); EO or PO adducts of sugaralcohols; monosaccharides such as galactose, glucose and fructose, and their EO or PO adducts; polysaccharides such as maltose and lactose, and their EO or PO adducts (polyols); surfactants such as POE alkyl ethers (POE is polyoxyethylene), POE branched alkyl ethers, POE sorbitan esters, POE glycerol fatty acid esters, POE hydrogenated castor oil, sorbitan ester, glycerol fatty acid esters and polyglycerol fatty acid ester; drugs such as vitamins, antiplogistics, activators, UV absorbers and the like; water-swelling clay minerals such as montmorillonite, saponite and hectorite; polysaccharides such as carageenan, xanthanum, sodium alginate, pullulan, methylcellulose, carboxymethylcellulose, hydroxyethylcellulose and hydroxypropylcellulose; synthetic polymers such as carboxyvinyl polymers; polyvinyl pyrrolidones and polyvinyl alcohols. They are incorporated into the preparation of the present invention in such amounts that will not impede the effects of the invention. In particular, when polyols are used, they are preferably incorporated by 0.01 to 50% by weight based on the total preparation.

[0025] The keratotic plug remover according to this invention may take a form of a poultice using cotton cloth, rayon cloth, tetron cloth, nylon cloth, either woven or non-woven, or using a plastic film, sheet, beside pack preparations.

[0026] The keratotic plug remover of this invention can be manufactured according to conventional processes for the manufacture of ordinary packs and poultice.

[0027] The manner of removing keratotic plugs by the use of the keratotic plug remover of the invention is the same as the manner of using ordinary packs and poultice. Namely, when a pack preparation is used, it is first applied to the

part or the skin which has keratotic plugs, particularly likely to the nose, chin and forehead, and after dried, it is peeled off.

[0028] Since the keratotic plug remover of this invention effectively removes keratotic plugs, the conspicuousness of the skin pores is mitigated, skin pores are maintained clean, and healthy skin can be obtained. Further, the remover of this invention, does not hurt the skin.

[0029] Other features of the invention will become apparent in the course of the following descriptions of exemplary embodiments which are given for illustration of the invention and are not intended to be limiting thereof.

### EXAMPLES

[0030] Where not otherwise indicated all amounts in the examples are in terms of % by weight based on the total weight of the composition.

Example 1:

[0031] Keratotic plug removers were prepared according to the pack, preparation method mentioned below using the polymers listed in Table 1. A panel washed their face and used the preparation on their faces at an application rate of 0.1 ml/cm<sup>2</sup>. The conditions of use were a temperature of 25°C, 50% humidity for 30 minutes. When 30 minutes had passed, the pack was peeled off. The ratio of removal of the keratotic plugs was calculated according to the following equation for evaluation;

$$\text{Removal ratio of keratotic plugs} = \frac{\text{number of keratotic plugs adhered on } 1\text{cm}^2 \text{ pack}}{\text{number of keratotic plugs existing in the } 1\text{ cm}^2 \text{ wing skin of nose}} \times 100$$

The results are also shown in Table 1.

Evaluation:

[0032]

- A: over 20% removal ratio of keratotic plugs
- B: 5 to 20% removal ratio of keratotic plugs
- C: less than 5% removal ratio of keratotic plugs

Preparation:

[0033]

Polymer	15 to 20% by weight
Glycerol	5

## Example 3:

[0040] Keratotic plug removers having the formulations as in Table 3 were prepared according to the conventional

manner, and the keratotic plug removing performance was evaluated. The results are shown in Table 4.

Evaluation method:

- 5 [0041] Panel members washed their faces and applied keratotic plug removers onto their cheeks (0.1 ml/cm<sup>2</sup>). The application was allowed to set at 25°C, humidity 50% for 30 minutes, and subsequently the pack film was peeled off. The number of the members who used an invention product A on their left cheek and an invention product B on their right cheek was the same as the number of the members who used an invention product B on their left cheek and an invention product A on their right cheek.
- 10 [0042] The panel members evaluated the removers by answering "Invention product A removed better", "Invention product A and Invention product B were almost the same concerning the removal performance" or "Invention product B removed better", and their percentages were obtained.

Example 6:

[0048] A keratotic plug remover having the following formulation was prepared.

5	Polymethacryloyloxy trimethylammonium chloride (QDM) (MW: 400,000)	27.0 wt. %
	Sorbitol	3.0
	Sericite	3.0
	Ethanol	5.0
10	Antiseptic	suitable amount
	Water	balance

Example 7:

15 [0049] A keratotic plug removed having the following formulation was prepared.

20	Polymethacryloyloxy trimethylammonium chloride (QDM) (MW: 250,000)	27.0 wt. %
	Polyoxyethylene hydrogenated castor oil (E.O. 20)	2.0
	Squalane	0.5
25	1-Isostearoyl-3-myristoyl glycerol (DGMI)	1.5
	86% Glycerol	2.0
	Propylene glycol	1.0
	Sericite	3.0
30	Ethanol	5.0
	Antiseptic	suitable amount
	Water	balance

35 Example 8:

[0050] A keratotic plug remover having the following formulation was prepared.

40	Polymethacryloyloxy trimethylammonium chloride (QDM) (MW: 200,000)	15.0 wt. %
	Polymethacrylamidepropyl trimethyl ammonium chloride (MAPTAC) (MW: 300,000)	15.0
45	Polyoxyethylene hydrogenated castor oil (E.O. 40)	1.5
	Squalane	0.5
	2-Ethylhexanoic triglyceride	2.0
50	Sorbitol	3.0
	Kaolin	7.0
	Titanium oxide	2.0
	Ethanol	5.0
55	Antiseptic	suitable amount
	Water	balance

## Claims

1. Use of a composition, comprising a polymer compound having a salt forming group, as a keratotic plug remover, except for methods for treatment of the human or animal body by surgery or therapy and diagnostic methods practiced on the human or animal body.
2. Use of polymer compound having a salt forming group for the manufacture of a composition for removing keratotic plugs.
3. The use as claimed in Claim 1 or 2, wherein said polymer compound is a synthetic polymer.
4. The use as claimed in Claim 1 or 2, wherein said salt forming group is selected from the group consisting of a carboxyl group, sulfonic acid group, sulfuric acid residual group, phosphoric acid residual group, nitric acid residual group, amino group and an ammonium group.
5. The use as claimed in Claim 1 or 2, wherein said polymer compound having a salt forming group has a molecular weight of from 10,000 to 1,500,000.
6. The use as claimed in Claim 1 or 2, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight based on the total weight of said composition.
7. The use as claimed in Claim 1 or 2, wherein the composition further comprises a solvent.
8. The use as claimed in Claim 7, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight, and the amount of said solvent is 30 to 99.99% by weight based on the total weight of said composition.
9. The use as claimed in Claim 1 or 2, wherein the composition further comprises a pigment.
10. The use as claimed in Claim 9, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight, and the amounts of said pigment is 0.1 to 70% by weight based on the total weight of said composition.
11. The use as claimed in Claim 1 or 2, wherein the composition further comprises a pigment and a solvent.
12. The use as claimed in Claim 11, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight, the amount of said pigment is 0.1 to 70% by weight and the amount of said solvent is 29.99 to 99.89% by weight based on the total weight of said composition.
13. The use as claimed in Claim 1 or 2, wherein the composition further comprises an oil component.
14. The use as claimed in Claim 13, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight and the amount of said oil component is 0.01 to 30% by weight, based on the total weight of said composition.
15. The use as claimed in Claim 1 or 2, wherein the composition further comprises an oil component and a solvent.
16. The use as claimed in Claim 15, wherein the amount of said polymer compound having a salt forming group is 0.01 to 70% by weight, the amount of said oil components is 0.01 to 30% by weight and the amount of said solvent is 29.99 to 99.988 by weight based on the total weight of said composition.
17. The use as claimed in Claim 1 or 2, wherein the composition further comprises a pigment and an oil component.
18. The use as claimed in Claim 1 or 2, wherein the composition further comprises a pigment, an oil component and a solvent.
19. A method for removing keratotic plugs, which comprises applying a keratotic remover composition as defined in any one of Claims 1 to 18 onto the skin, and peeling off after the composition is dried, except for methods for treatment

of the human or animal body by surgery or therapy and diagnostic methods practiced on the human or animal body.

20. The method according to Claim 19, wherein the keratotic plug remover is in the form of a poultice using cotton cloth, rayon cloth, tetron cloth, nylon cloth, either woven or non-woven, or using a plastic film sheet.

# Patentansprüche

1. Verwendung eines Mittels, umfassend ein Polymeres mit einer salzbildenden Gruppe, als Entferner für keratinöse Komedonen, ausser Verfahren zur chirurgischen oder therapeutischen Behandlung des menschlichen oder tierischen Körpers und Diagnostizierverfahren, die am menschlichen oder tierischen Körper vorgenommen werden.
2. Verwendung einer Polymerverbindung mit einer salzbildenden Gruppe zur Herstellung eines Mittels zur Entfernung keratinöser Komedonen.
3. Verwendung nach Anspruch 1 oder 2, wobei die Polymerverbindung ein synthetisches Polymer ist.
4. Verwendung nach Anspruch 1 oder 2, wobei die salzbildende Gruppe ausgewählt ist aus der Gruppe, bestehend aus einer Carboxylgruppe, einem Schwefelsäurerest, Phosphorsäurerest, Salpetersäurerest, Aminogruppe oder Ammoniumgruppe.
5. Verwendung nach Anspruch 1 oder 2, wobei die Polymerverbindung mit einer salzbildenden Gruppe ein Molekulargewicht von 10,000 bis 1,500,000 aufweist.
6. Verwendung nach Anspruch 1 oder 2, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe bei 0,01 bis 70 Gew.-% bezogen auf das Gesamtgewicht des Mittels beträgt.
7. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner ein Lösungsmittel umfasst.
8. Verwendung nach Anspruch 7, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe bei 0,01 bis 70 Gew.-% und die Menge des Lösungsmittels 30 bis 99,99 Gew.-%, jeweils bezogen auf das Gesamtgewicht des Mittels, beträgt.
9. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner ein Pigment umfasst.
10. Verwendung nach Anspruch 9, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe bei 0,01 bis 70 Gew.-% und die Mengen des Pigments 0,1 bis 70 Gew.-%, jeweils bezogen auf das Gesamtgewicht des Mittels, betragen.
11. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner ein Pigment und Lösungsmittel umfasst.
12. Verwendung nach Anspruch 11, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe 0,01 bis 70 Gew.-%, die Menge des Pigments 0,1 bis 70% und die Menge des Lösungsmittels 29,99 bis 99,89 Gew.-%, jeweils bezogen auf das Gesamtgewicht des Mittels, betragen.
13. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner eine Ölkomponente umfasst.
14. Verwendung nach Anspruch 13, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe 0,01 bis 70 Gew.-% und die Menge der Ölkomponente 0,01 bis 30 Gew.-%, jeweils bezogen auf das Gesamtgewicht des Mittels, betragen.
15. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner eine Ölkomponente und ein Lösungsmittel umfasst.
16. Verwendung nach Anspruch 15, wobei die Menge der Polymerverbindung mit einer salzbildenden Gruppe 0,01 bis 70 Gew.-%, die Menge der Ölkomponente 0,01 bis 30 Gew.-%, und die Menge des Lösungsmittels 29,99 bis 99,988, jeweils bezogen auf das Gesamtgewicht des Mittels, betragen.
17. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner ein Pigment und eine Ölkomponente umfasst.

18. Verwendung nach Anspruch 1 oder 2, wobei das Mittel ferner ein Pigment, eine Ölkomponente und ein Lösungsmittel umfasst.

19. Verfahren zur Entfernung von keratinösen Komedonen, das umfasst eine Anwendung eines Entfernens für keratinöse Komedonen wie er in irgendeinem der Ansprüche 1 bis 18 definiert wird, auf die Haut, und Abschälen nachdem das Mittel getrocknet ist, ausser Verfahren zur chirurgischen oder therapeutischen Behandlung des menschlichen oder tierischen Körpers oder diagnostischen Verfahren die an menschlichen oder tierischen Körper oder diagnostischen Verfahren, die am menschlichen oder tierischen Körper vorgenommen werden.

20. Verfahren nach Anspruch 19, wobei der Entferner für keratinöse Komedonen in Form eines Wickels vorliegt bei dem ein Baurnwolltuch, Rayontuch, Tetrontuch, Nylontuch, entweder gewoben oder ungewoben, eingesetzt wird oder bei dem eine Plastikfolie eingesetzt wird.

#### Revendications

1. Utilisation d'une composition, comprenant un composant polymère ayant un groupe apte à former un sel, en tant qu'agent d'élimination de bouchons kératotiques, excepté pour des méthodes de traitement du corps humain ou animal par chirurgie ou thérapie et des méthodes de diagnostic pratiquées sur le corps humain ou animal.
2. Utilisation d'une composition polymère ayant un groupe apte à former un sel, pour la fabrication d'une composition pour l'élimination de bouchons kératotiques.
3. Utilisation selon la revendication 1 ou 2, dans laquelle ledit composant polymère est un polymère synthétique.
4. Utilisation selon la revendication 1 ou 2, dans laquelle ledit groupe apte à former un sel est choisi dans l'ensemble constitué par un groupe carboxyle, un groupe d'acide sulfonique, un groupe résiduel d'acide sulfurique, un groupe résiduel d'acide phosphorique, un groupe résiduel d'acide nitrique, un groupe amino et un groupe ammonium.
5. Utilisation selon la revendication 1 ou 2, dans laquelle ledit composant polymère ayant un groupe apte à former un sel a un poids moléculaire de 10 000 à 1 500 000.
6. Utilisation selon la revendication 1 ou 2, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids sur la base du poids total de ladite composition.
7. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un solvant.
8. Utilisation selon la revendication 7, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids et la quantité dudit solvant est de 30 à 99,99 % en poids, sur la base du poids total de ladite composition.
9. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un pigment.
10. Utilisation selon la revendication 9, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids et la quantité dudit pigment est de 0,1 à 70 % en poids, sur la base du poids total de ladite composition.
11. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un pigment et un solvant.
12. Utilisation selon la revendication 11, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids, la quantité dudit pigment est de 0,1 à 70 % en poids et la quantité dudit solvant est de 29,99 à 99,89 % en poids, sur la base du poids total de ladite composition.
13. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un composant huile.
14. Utilisation selon la revendication 13, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids et la quantité dudit composant huile est de 0,01 à 30 % en poids, sur la base du poids total de ladite composition.

15. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un composant huile et un solvant.

5 16. Utilisation selon la revendication 15, dans laquelle la quantité dudit composant polymère ayant un groupe apte à former un sel est de 0,01 à 70 % en poids, la quantité du composant huile est de 0,01 à 30 % en poids et la quantité dudit solvant est de 29,99 à 99,98 % en poids, sur la base du poids total de ladite composition.

10 17. Utilisation selon la revendication 1 ou 2, dans laquelle la composition comprend en outre un pigment et composant huile.

18. Utilisation selon la revendication 1 ou 2, dans laquelle ladite composition comprend en outre un pigment, un composant huile et un solvant.

15 19. Procédé d'élimination de bouchons kératotiques qui comprend l'application sur la peau d'une composition d'élimination de bouchons kératotiques telle que définie dans l'une quelconque des revendications 1 à 18 et l'élimination de cette composition après son séchage, excepté les méthodes de traitement du corps humain ou animal par chirurgie ou thérapie et les méthodes de diagnostic pratiquées sur le corps humain ou animal.

20 20. Procédé selon la revendication 19, dans laquelle l'agent d'élimination de bouchons kératotiques se présente sous la forme d'un cataplasme comprenant une étoffe en coton, une étoffe en rayonne, une étoffe en tétron, une étoffe en nylon, tissées ou non tissées, ou comprenant une feuille en film de matière plastique.
